

ENVIRONMENTAL POLICY

At Endeavour Silver we find, build, and operate quality silver mines in a sustainable way to create real value for stakeholders. Our goal is to become a premier senior silver producer in the silver mining sector. By continually improving what we do and how we do it, we aim to make a positive difference in people's lives.

Our Environmental Policy articulates our commitment to preventing or mitigating, to the greatest extent reasonably possible, the impact of mine exploitation on the environment. Endeavour Silver is committed to:

- Complying with environmental laws in force in the countries where we operate, with international guidelines and signed commitments, applying protectionist criteria in their absence.
- Considering environmental factors in operational decisions and in new projects.
- Identifying and systematically evaluating the environmental impact produced in all stages of our operations, adopting effective and efficient measures to prevent, mitigate, or control potential adverse effects on employees, the community, and the environment.
- Implementing and maintaining an Environmental Management System that permits evaluation and continuous improvement of our environmental performance, based on the establishment and revision of objectives and goals as well as programs to achieve them.
- Promoting rational and efficient use of natural resources, minimizing the use of new resources and recycling and/or reusing residual resources.
- Controlling the production of solid and liquid waste and gaseous atmospheric emissions, and use of chemical substances, favoring and promoting practices for reduction, recovery, or elimination thereof, and implementing a green procurement process.
- Identifying situations of environmental risk and developing response plans that effectively control them.
- Building awareness of environmental protection at all levels of our organization and with contractors and the community, through communication, training, and dissemination of standards and policies.
- Adopting good engineering, operation, and maintenance practices in projects, and in the recovery of areas degraded by our processes and activities.
- Maintaining effective and ongoing communication with the authorities and the community, attending to their concerns, supporting actions for mutual benefit and informing them of the company's environmental programs and results.
- Requiring our contractors and providers to use practices and procedures in line with the policies of our Environmental Management System, thereby assuring the fulfillment of our commitments.
- Promoting use and implementation of clean technologies and renewable energy sources, such as wind and solar, and reuse of resources.

Endeavour Silver will provide the necessary resources to comply with the commitments of this policy, which will be periodically reviewed, updated, and disseminated amongst employees, contractors and interested stakeholders.
